

How do you implement a strategy?

An important part is the implementation. The plan is written down, but if you do not start implementing it, it remains a document that is forgotten. Implementation is what makes your organisations plan move forward. Equally important is to keep reviewing the plan. What does implementation require? It involves your resources and motivation of staff to use your resource to push to achieve your goals. Your strategy is implemented by allotting specific resources and budgets to it. Individuals are assigned tasks.
